Results-driven senior full-stack developer with expertise across front-end and back-end development. Proficient in PHP, JavaScript, TypeScript, and Python, with a strong emphasis on building scalable applications. Expertise in Linux server administration, including the configuration and optimization of Apache and Nginx web servers, ensuring high performance.

WORK EXPERIENCE

Senior Full-Stack Developer

Sep 2024 - Present

Appclick Technology

Sheridan, WY, USA (Remote)

- Designed and deployed a multilingual conversational AI engine supporting 50+ languages, enabling businesses in America, Europe and Asia to train domain-specific virtual assistants via automated ingestion of structured and unstructured data from URLs, PDFs, and documents, reducing customer service response times to near real-time. Leveraged server-side rendering and dynamic routing to ensure fast, SEO-friendly delivery of AI-generated content globally.
- Architected a scalable knowledge base processing pipeline with intelligent web scraping, document parsing, and model fine-tuning capabilities, integrating queued background jobs and task schedulers to automate data ingestion and model retraining while maintaining peak platform performance under high concurrency.
- Engineered a multimedia AI content creation suite integrating text-to-speech, AI-assisted content generation, voice cloning, celebrity voice synthesis, AI photo avatars, and lip-sync "talking head" video generation to expand creative monetization tools for global customers. Utilized incremental builds, streaming responses, and optimized asset delivery for rapid rendering of heavy media assets.
- Developed a facial expression normalization API using *facefixlib* to process and modify video frames into canonical expressions, implementing asynchronous processing pipelines with cron-driven batch execution to offload intensive media rendering tasks, reducing main-thread load and improving user experience across regions.
- Engineered a task automation system with scheduled background processes to monitor, archive, and purge 5,000+ obsolete files weekly, reducing storage bloat by 85%, improving server response times by up to 40%, and sustaining peak performance during high-traffic periods.

Senior Full-Stack Developer

Feb 2024 - Sep 2024

Eleganz IT Solutions Ltd

Burnaby, BC, Canada (Remote)

- Engineered an intelligent content-indexing and routing engine for the Federal Government of Nigeria to automatically assign memos and file requests to the correct department, streamlining inter-agency workflows within government parastatal and reducing manual processing time by over 60%.
- Engineered a secure, configurable email delivery infrastructure using SMTP with authentication and encryption protocols to handle high-volume transactional and notification emails, ensuring reliable cross-department communication, compliance with government data policies, and minimal delivery latency.
- Architected scalable cloud-based storage workflows leveraging AWS S3 object storage for secure memo archiving and file sharing, enabling rapid retrieval, fine-grained role-based access control, lifecycle management for cost efficiency, and 99.9% uptime across multi-department government operations.
- Designed and implemented a high-performance e-commerce platform with a secure, PCI-DSS-compliant payment gateway integration, incorporating transaction validation, fraud detection mechanisms, and asynchronous order processing to optimize checkout speed, enhance customer trust, and ensure seamless multi-currency support.
- Engineered a custom end-to-end observability pipeline integrating real-time application performance monitoring, log aggregation, and automated alerting, enabling proactive anomaly detection and reducing incident response time by 40% through streamlined root cause analysis and rapid remediation workflows.

Full-Stack Developer

Feb 2023 - Jan 2024

Bovato Industry

Ibadan, Nigeria

- Architected and deployed a scalable, service-oriented backend using FastAPI for rapid API development, modular microservice design for independent deployment, and inter-service communication via lightweight message queues and RESTful API endpoints, with Swagger integration for comprehensive API documentation and testing.
- Designed and optimized high-performance relational database schemas with strong referential integrity and strategic indexing to handle complex CRM relationships, powering modules such as lead tracking, client management, document storage, and sales pipelines while sustaining query efficiency under heavy loads.
- Implemented secure authentication and granular authorization workflows leveraging OAuth 2.0, role-based access control (RBAC), and token validation to safeguard sensitive multi-tenant CRM data.
- Optimized client-server interactions with low-latency API response handling, asynchronous data fetching, and intelligent caching, resulting in faster page loads and a smoother, more responsive interface for data-heavy dashboards.
- Integrated automated cross-module updates between sales, lead management, communications, analytics, and audit trails, enabling real-time insights and eliminating manual synchronization errors across enterprise systems.
- Engineered automated CI/CD pipelines for containerized microservices with integrated test suites and deployment orchestration, paired with real-time monitoring and alerting to achieve 99.9% uptime, proactive fault detection, and rapid rollback capabilities.

Full-Stack Developer and Trainer

Nov 2021 - Jan 2023

Parach ICT Academy

Ibadan, Nigeria

- Designed and developed new features for existing applications, leading to a 75% increase in user satisfaction and achieving five-star reviews from both internal and external users.

- Provided in-depth documentation and strategic insights on different software solution to the management, showcasing its value proposition, significantly enhanced the company's operational efficiency by 60% and overall value.
- Prepared and delivered engaging and interactive training sessions that led to 70% improvement in trainee coding skills from pre-training assessments to post-training evaluations.
- Conducted training sessions on full-stack development, covering front-end, back-end, and database technologies, ensuring that about 90% of trainees obtained certification after completing the training program.

Software Engineer – Data Operations

Nov 2020 - Oct 2021

Grace and Mercy Initiative

Ibadan, Nigeria

- Cleansed and standardized datasets using SQL queries and Python (Pandas) scripts to remove inaccuracies, duplicates, and inconsistencies, achieving a 98% accuracy rate and enabling more reliable data-driven decision-making.
- Presented complex technical software concepts in clear, accessible terms to non-technical stakeholders and board members, improving cross-department alignment and project adoption. Created structured workflows and version-controlled documentation using Git and Markdown, enhancing collaboration, streamlining project handovers, and providing actionable insights for future development cycles.
- Developed automated validation and preprocessing scripts with Python and cron jobs, reducing manual entry time by 40% and ensuring consistent data formatting across systems.
- Designed and maintained interactive visual reports using Python (Seaborn, Matplotlib) to analyze operational data, uncover trends, and present actionable insights for ongoing process optimization.

Full-Stack Developer

Feb 2019 - Oct 2020

Steinserve Innovations

Ibadan, Nigeria

- Analyzed software defects and functional gaps through collaborative troubleshooting and technical research, resulting in a 30% improvement in application stability and performance.
- Developed and integrated new application modules from design to deployment, adhering to the full software development life cycle and ensuring a 25% reduction in time to market for deliverables.
- Built and optimized database queries and API integrations to enhance feature responsiveness and data flow efficiency, achieving a 40% increase in system performance across the platform.
- Researched, adopted, and implemented emerging technologies and frameworks into active projects, leading to a 20% increase in project efficiency and demonstrating adaptability and a proactive learning mindset.

EDUCATION

Python Master Class

Jan 2018 - Mar 2020

Steinserve Innovations

- Web Development
- Big Data Concept

Bachelor of Science and Education in Physics

Sep 2012 - Nov 2017

Obafemi Awolowo University

SKILLS

Technical Skills:

- Programming Languages: HTML5, CSS3, JavaScript, TypeScript, PHP, Python
- Framework & UI Libraries: React, Next.js, Angular .JS, Vue.js, JQuery, Tailwind CSS, Bootstrap, Material UI, Ant design, Mantine, SASS/CSSS
- Backend Technologies & Runtime Environments: Node.js, Express.js, Laravel, Fast Api, Django, Flask
- Database Management & Tools: MySQL, PostgreSQL, Redis, MongoDB, Prisma, Sequelize, Knex, Mongoose, SQLite3, Supabase, Firebase
- API Development, Testing & Documentation: Postman, Swagger (OpenAPI), Thunder Client, Insomnia, SoapUI, Paw
- API & HTTP Clients: GraphQL, REST, Axios, Fetch API
- Testing Frameworks & Tools: Jest, Mocha, Sinon, Vitest, React Testing Library, Angular Testing Library, Playwrite, Cypress
- Version Control & Collaboration: Git, GitHub, GitLab, Jira, Trello, Asana, ClickUp, Toggl (time tracking), Slack (team communication)
- DevOps & CI/CD Tools: Docker, GitHub Actions, GitLab CI, Jenkins, YAML scripting, k6 (performance testing), SonarQube (code quality), Kubernetes (K8s)
- Cloud Services (AWS): EC2, S3, IAM, RDS, Route 53, VPC, Auto Scaling Group, NAT Gateway, Private Subnets, Availability Zones, Application Load Balancer (ALB), AWS Amplify
- Server & Deployment Software: Apache, Nginx, PM2
- Operating Systems: Linux (Ubuntu, CLI usage, Bash scripting), MacOS
- Software Development Practices: Agile, Scrum, Test-Driven Development (TDD), Behavior-Driven Development (BDD)
- Architectural Patterns: MVC, MVT, Component-Based Architecture
- Data Structures & Algorithms (DSA): Hash Maps, Graphs, Trees, Sorting & Searching Techniques, Algorithm Optimization
- Documentation Tools: JSDoc
- Content Management Systems: WordPress
